Function 1 (Target)

Step 1 - Hit Target button

Step 2 – Take photo of colored object

Step 3 – see result

Function 2 (Grid)

Step 1 – hit grid button

Step 2 – take photo of colored area

Step 3 – See result

Tip : -

Works at night. But, for better result use app in day.

I had device with API 19 only, so was not able to test on newer phones. But it will work the same.

App works in both orientation. But do not change orientation while camera is working. App will crash if do so. I tried to debug that but no luck.

Few more snaps -

Color 1 : Blue

Color 2 : Green
